

Sugar

Water

Rust

Salt

Made of 2 or more different atoms

Oxygen

Copper

Helium

Silver

Made up of only one kind of atom

Soil

Salt water

Blood

Air

Made of atoms, molecules, compounds that can be separated

Sugar

Silver Sulfide

Water

2 atoms of gold

2 or more atoms, same kind or different,

Directions: Place the cards you cut out in the proper location depending on the examples given underneath each blank.

A substance made of two or more different atoms chemically combined together.

The building block which all matter is made up of

A collection of 2 or more atoms, compounds &/or molecules **physically** combined, which can be separated.

Molecule

Molecule

Two or more atoms bonded together, the same or different

Made of one kind of atom that cannot be separated into a simpler form.
Found on the periodic table.
